### CEI Talks Culvert Design at Annual MACC Conference

On Saturday March 2, 2013, Comprehensive Environmental Inc. (CEI) participated in the Massachusetts Association of Conservation Commissions in Worcester, MA. An exhibitor and supporter of this annual conference for over a decade, CEI joined over 700 conservation commission members, state agencies, educators and non-profit groups to discuss a number of wetlands related topics.

In addition to being an exhibitor, CEI's David Nyman, P.E. participated in the Culvert Replacement and Ecosystem Connectivity Session by giving a presentation on *Designing Stream Crossings for Wildlife Passage*. The presentation discussed engineering considerations for meeting stream crossing standards, while providing for a sustainable structure design. Design elements highlighted in the talk included cross-section configuration, vertical alignment, streambed materials and placement, and stability analysis.
