

CEI Collaborates with MA DCR to Protect Wachusett Reservoir

Over the past year CEI has been working with the Massachusetts Department of Conservation and Recreation on a number of water quality improvement efforts to further protect the drinking water in Wachusett Reservoir from potentially polluted stormwater and accidental spills. This direct discharge elimination effort included the evaluation of subwatersheds and alternatives for eliminating discharges, treating stormwater and containing accidental spills.

Most recently, CEI has been developing transportation related stormwater Best Management (BMP) designs for water quality treatment along arterial roadways within the reservoir watershed. CEI will work with Watershed Management staff to implement these prioritized BMPs to meet targeted water quality measures.

CEI has been providing similar watershed management and stormwater engineering services for over 25 years. For additional information on the Wachusett Reservoir project or on CEI's services, please contact Ben Lundsted at 800.725.2550 x317 or blundsted@ceiengineers.com.
