

CEI Completes Comprehensive Brownfield Inventory for New Britain, CT

With over 450,000 Brownfields in the U.S.¹, Planning and Economic Development Departments are now seeing the potential in the redevelopment of Brownfield sites. Reuse of these locations can spark an economic revitalization that can not only increase property value and tax revenue, but create jobs and a safer, healthier community environment.

CEI recently worked with the City of New Britain, CT to develop a comprehensive Brownfields Inventory, the first step in identifying priority sites for revitalization.

Taking on a Brownfield site for redevelopment is more feasible than ever with federal and state funding available and can be the spark needed to ignite an economic revitalization. A Brownfield Inventory can help a community identify and prioritize Brownfield locations, focus redevelopment efforts and most importantly, serve as a reference to substantiate requests for assistance from the many federal and state Brownfield programs that are readily available.
