## CEI Teams with MA DER on Culvert Replacement Training Project

CEI is pleased to be working with the MA Division of Ecological Restoration (DER) on a long term culvert replacement training project. This pilot program includes 3 phases:

1. River/Culvert Assessment;
2. Culvert Design & Permitting; and
3. Construction

This project aims to provide classroom and field training to municipal Department of Public Works staff on the design and installation of culverts while considering climate change and meeting the state's Stream Crossing Standards.

CEI is assisting DER by providing engineering designs and training support for the replacement of two culverts located in Ashfield and Spencer, MA.

For more information on this project please visit the May 2016 issue of DER's *Ebb & Flow* newsletter at the following link:
