

INNOVATIONS OVERVIEW

CAP Tool™

CEI's exclusive CAP Tool™ (Comprehensive Asset Planning Tool) provides a mechanism for evaluating and ranking the priority of various assets or needed capital improvement projects using ranking criteria identified for the system. Ultimately, this capital improvement prioritization program provides the client with a road map to follow, while allowing for periodic updating as priorities and other constraints change over time. The client and programmer identify: (1) the assets to be included in the analysis, (2) the criteria influencing prioritization and (3) the number of criteria each asset meets. The assets are then imported into the CAP Tool™ graphic. The assets meeting the most criteria are displayed at the top of the pyramid with other assets shown in lower steps, depending on the number of criteria met by each. The graphic CAP Tool™ provides a means for communication with decision-makers in a straight forward and efficient way.
